

Enrollment Success Through Decentralized Service Offerings

US based medical aesthetics trial

- Infraorbital Hollow
- 9 US sites
- 150 randomized subjects
- Hybrid monitoring model (virtual)

Challenges

- Target enrollment completion during the holiday season - December 31, 2020
- Sponsor concerns about the rise in confirmed COVID cases and the potential impact on continued participation
- Extreme lockdowns in key geographic areas where participating sites were located and impact on subject's ability to comply with study visits
- Sites expressed an interest and desire to remain open and continue to support this trial while maintaining the safety of their subjects and staff
- Strong collaboration between sponsor and CRO to implement initiatives to enhance enrollment effort/focus
 - *Increased enrollment cap for top enrolling sites*
 - *Maintained constant and supportive communication with the sites*
 - *Provided support for additional administrative support for expedited enrollment*

100%
Enrollment

*Met Three Days
Ahead of Target*

Lets Talk!
